Description

An essential tool in every pottery studio

Smooth and shape your clay

This soft rubber palette rib is malleable, with fine, tapered edges. It's perfect for smoothing and shaping your clay whether on the wheel or hand building.

Reliable

This soft rib is made from durable rubber, making it reliable and long lasting. It's also an affordable tool to buy in multiples for pottery studios and classrooms.

Versatile application

These ribs come in two sizes - large and small - and thus suitable for using to stretch, shape and smooth joins and corners no matter how tight. Take one of each and have them on hand for your small and large pieces, whether you are throwing on the wheel or sculpting/building your piece.
