Description

Take your pottery to new heights with a sponge on a stick

Your partner in creating tall pieces

When throwing or hand building taller pieces, sometimes it's difficult for your hand to reach down inside the piece to clean up and absorb excess water from the bottom. This is where this sponge on a stick can help you extend your reach by up to 40cm.

Use as is or tailor it for your needs

This sponge on a stick consists of a synthetic round sponge firmly attached to the end of a sturdy wooden dowel. The sponge is 7.5cm in diameter and 3 cm thick. The dowel is 40 cm long. You can use the sponge on a stick as is to clean up the inside of your taller pieces and absorb excess water, or trim and shape it to suit your unique needs for your craft.

Durable and absorbent

The synthetic material of this sponge makes it durable and absorbent. It will tirelessly soak up excess water from your projects for a long time. Stiff and dense, it can handle even the heaviest

of groggy clay bodies.
