Description

Do not shake container stir thoroughly before use

Store glazes out of direct sunlight at temperatures below 30°C and above 5°C

Do not add water to glaze. Adding water will increase the number of coats required for correct thickness.

Apply glaze using a soft brush. Apply 3-4 even coats to ensure adequate thickness.

Always fire glaze to recommended temperature.

Keep container lid clean and tightly sealed to avoid glaze dehydration.

Northcote Pottery recommends testing of all products to ensure suitability for your requirements as glaze application, clay type, firing atmosphere and glaze flow can vary greatly.
